# INTRODUCTION

In the mid-1990s, the California Department of Alcohol and Drug Programs, in collaboration with the Center for Applied Research Solutions (CARS), Inc. began to work toward improving the state's prevention information system. A key component of this information system was the continuous collection, monitoring and reporting of selected community-level indicators that would serve as direct and indirect measures of alcohol and other drug use prevalence and related problems. This information system was designed to assist with state and local prevention planning and policy-making by providing useful, systematic data about prevention and treatment needs and outcomes throughout the state.

The present report is the most recent product of this ongoing effort. It differs from earlier versions in a few important ways.

- First, while previous reports typically summarized data for more than twenty-five indicators of health and social conditions that are theoretically linked to problem substance use, the current version is more streamlined, focusing on seven key indicators of AOD use and abuse prevalence and their direct consequences, including impacts on the criminal justice, health and alcohol and drug treatment systems.
- Second, the 2010 report updates information contained in earlier versions, but expands in its depth to summarize data for populations within the larger county, including age, gender, and race/ethnicity sub-groups. This expanded detail allows for more precise analyses of alcohol and drug use problems within a county population and enhances the ability to effectively target prevention and intervention strategies to community needs.

Similar to previous reports, the 2010 version includes simple analytic tools to help users interpret the information presented. This includes use of population-based rates (e.g., the number of incidents relative to the total population) to make meaningful comparisons between geographic areas that differ in population size, or comparisons between differing time points. Data is presented at both the county and state level to allow county rates to be evaluated against a relative average.

The overall intent of the report is to provide a simple, easy-to-use resource that helps synthesize the most relevant indicator data currently available to assess substance use problems, in an effort to optimize prevention planning and outcome measurement efforts in communities through the state. Specifically, it is designed to support the work of planners, policy-makers, and practitioners in the field in:

- Determining the incidence of alcohol and other drug use problems within county populations and sub-populations;
- Monitoring trends in problem incidence to identify emergent issues and detect changes in status over time;
- Establishing program resource levels that are appropriate to address the nature and extent of prevention and treatment needs; and,
- Documenting progress toward achieving targeted prevention objectives and outcomes.

The report contains information on several key indicators of alcohol and drug prevalence and consequences for California populations in each of the following seven indicators:

1. Household prevalence of past year binge drinking;
2. Admissions to publicly-funded and/or monitored alcohol and other drug treatment facilities;
3. Arrests for drug-related criminal offenses;
4. Arrests for alcohol-related criminal offenses;
5. Motor vehicle accidents involving drivers who had been drinking;
6. Hospitalizations for alcohol and drug-related conditions; and,
7. Mortality attributable to acute and chronic alcohol and drug use.

---

Each report contains data compiled from several sources, including a statewide, longitudinal survey of California household populations, and state data systems housing public archival records from six central agencies, including the California Department of Justice (DOJ), the California Highway Patrol (CHP), the California Department of Public Health, Vital Statistics Section, the Office of Statewide Health Planning and Development (OSHPD), the Department of Alcohol and Drug Programs (ADP), and the University of California, Los Angeles (UCLA). This reliance on statewide data sources ensures that the information reported is drawn from reliable and valid measures that are routinely and uniformly collected across jurisdictions (i.e., all counties use the same data collection), allowing for comparisons over time, across counties, and between counties and the state.

---

## KEY FINDINGS

### Indicator 1: Prevalence of Past Year Binge Drinking

- Approximately 27 percent of Colusa, Glenn, and Tehama County residents age 18 and older participated in binge drinking in 2007 compared to the statewide rate of 30 percent.
- Males participated in binge drinking much more frequently than females (40 percent versus 14 percent) in Colusa, Glenn, and Tehama Counties in 2007.

### Indicator 2: Admissions to Alcohol and Other Drug Treatment

- Overall, admission rates to treatment facilities in Colusa, Glenn, and Trinity Counties have increased since 2000, after peaking in 2002 at 888 per 100,000. In 2000 there were about 152 admissions per 100,000 compared to 386 admissions per 100,000 in 2008. Colusa County's AOD admission rate was lower than the state except in 2002 and 2003. There may be differences in detoxification and non-detoxification service admission trends that affect this overall trend (see "Treatment Data Clarifications" section on page 9 for detail).
- Admissions due to methamphetamine use accounted for 50 percent of all admissions in 2008. Admissions due to alcohol use accounted for roughly 24 percent of admissions, marijuana for 22 percent of admissions, heroin for two percent of admissions and other drugs for two percent.
- Admission rates were highest among Blacks at 2,885 per 100,000 in 2008.
- The highest rate of admissions was for 25 to 34 year olds with a rate of 1,243 per 100,000 in 2008. The next highest rate was for 18 to 24 year olds with a rate of 602 per 100,000. 35 to 44 year olds also had a high rate at 539 per 100,000 in 2008.

### Indicator 3: Arrests for Drug-Related Crime

- Crime rates for felony and misdemeanor drug offenses increased from 1,083 per 100,000 in 2000 to 1,194 per 100,000 in 2008. Glenn County's drug arrest rate was higher than the state each year.
- Arrests due to dangerous drug offenses accounted for approximately 17 percent in 2008, narcotics for roughly six percent of drug arrests, marijuana for 22 percent of drug arrests, and 55 percent of drug arrests in 2008 were for other drug violations.
- The highest rate of arrests for drug-related crime was for 18 to 24 year olds with a rate of 2,556 per 100,000 in 2008. The next highest rate was for 25 to 34 year olds with a rate of 2182 per 100,000.

### Indicator 4: Arrests for Alcohol-Related Crime

- Crime rates for felony and misdemeanor alcohol offenses increased from 2,646 per 100,000 in 2000 to 3,143 per 100,000 in 2008. Glenn County's alcohol arrest rate was much higher than the state overall each year.
- Arrests due to driving-under-the-influence accounted for approximately 69 percent in 2008, public drunkenness for roughly 29 percent of alcohol arrests, and one percent of alcohol arrests in 2008 were for liquor law violations.
- The highest rate of arrests for alcohol-related crime was for 25 to 34 year olds with a rate of 5,111 per 100,000 in 2008. The next highest rate was for 35 to 44 year olds with a rate of 4,710 per 100,000. 18 to 24 year olds and 45 to 54 year olds also had high drug arrest rates at 4,589 and 3,411 per 100,000, respectively.

---

## **Indicator 5: Alcohol-Involved Motor Vehicle Accidents**

- The rate of fatalities in alcohol-involved accidents in Glenn County was higher than the state overall each year, except in 2001 and 2005.
- Males accounted for more than 80 percent of total parties who had been drinking in alcohol-involved accidents in 2008. During this year Blacks had the rate of 694 per 100,000, Hispanics had 215 per 100,000 and Whites had 134 per 100,000.
- 18 to 24 year olds (357 per 100,000) accounted for the highest rate of parties who had been drinking in alcohol-involved accidents in 2008. The next highest rate was for 35 to 44 year olds with a rate of 335 per 100,000. 25 to 34 year olds also had a high rate at 276 per 100,000.

## **Indicator 6: Hospitalizations Due to Alcohol and Drug Use**

- The rate of hospitalizations due to alcohol and drug use increased from 126 per 100,000 in 2000 to 179 per 100,000 in 2007. Colusa, Glenn, and Trinity Counties' AOD hospitalization rate was lower than the state overall each year.
- The rate of hospitalizations due to alcohol-related causes increased from 39 per 100,000 in 2000 to 63 per 100,000 in 2007, after peaking in 2004 at 98 per 100,000. Colusa, Glenn, and Trinity Counties' alcohol-related hospitalization rate was lower than the state each year except in 2006.
- The rate of hospitalizations due to drug-related causes increased from 87 per 100,000 in 2000 to 126 per 100,000 in 2007. Colusa, Glenn, and Trinity Counties' drug-related hospitalization rate was lower than the state overall each year until 2007.

## **Indicator 7: Deaths Due to Alcohol and Drug Use**

- The death rate due to alcohol and drug use increased between 2000 and 2007 from 3.76 deaths per 100,000 to 23.06 deaths per 100,000, after peaking at 35.22 per 100,000 in 2006. Glenn County's AOD mortality rate was generally similar to the state overall each year.
- The death rate due to alcohol use decreased overall between 2000 and 2007 from 3.74 per 100,000 to 3.39 per 100,000, higher than the statewide rates except in 2000, 2004, and 2007.
- The death rate due to drug use increased greatly between 2000 and 2007 from 0.00 per 100,000 to 20.35 per 100,000, similar to the statewide rates until 2006 when it jumped above.

Counties by Age  
Category

## Indicator 2: Admissions to Alcohol and Other Drug Treatment

The number of admissions to publicly funded alcohol and other drug treatment facilities in California and rate of admission per 100,000 total population.

### Treatment Data Clarifications

Findings for Indicator 2: Admissions to Alcohol and Other Drug Treatment are based on total admissions rather than unique client counts. Clients with multiple treatment admissions during the year tend to bias the demographic and service characteristics described. These findings include admissions for both detoxification and other treatment services. Detoxification services are short term, often repeated numerous times, and used primarily for alcohol or heroin treatment. The inclusion of admissions to detoxification services biases the demographic and service characteristics described.

The Substance Abuse Crime Prevention Act (SACPA) was implemented in July 2001. Clients referred by the criminal justice system compete for limited treatment services resources and are often given priority over clients referred by other sources. In 2000, criminal justice referrals made up only 26 percent of all admissions. By 2004, criminal justice referrals made up 42% of the admissions. The influx of these clients with their specific demographic and service characteristics impact the makeup of the treatment population described in the key findings. For instance, clients referred by the criminal justice system rarely use detoxification services, and more often have a primary drug other than alcohol. Also, SACPA referred clients do not frequently use narcotic replacement treatment for heroin/opiate abuse. Consequently, the number of admissions to detoxification services has decreased as well as the number of admissions with alcohol or heroin as their primary drug problem compared with pre-SACPA levels.
